**ABSTRACT:** Medicinal plants mentioned in the ayurvedic classic Basavarajeeyam are enumerated.

### INTRODUCTION

Basavaraju of 16<sup>th</sup> century had a remarkable distinction in the field of Ayurveda Basavarajeeyam is his famous medical writing, which contains 25 chapters. It was explained both in Sanskrit slakes and in Telugu verses. It contains the essence of 48 ancient medical references, out of which only a few are available now.

Basavarajeeyam is great medical book for diagnosis and treatment of many diseases. He was the first to find out the panaceas using snake venom, mercury etc. Basavaraju was the pioneer of introducing "Poornachandrodayam". Basavarajeeyam is a popular medical classic among Indian medical references. The book has got wide popularity in Karnataka and Maharashtra.

Basavarajeeyam is quoted in Mukhopadhyaya's History of Indian Medicine (1974) and in vemuri sankara sastry's History of Ayurvedic Medicine (1987). Basavarajeeyam was written in Telugu script in detail by puvvada suryanarayana Rao (1989). Goverdhana sarma (1930) wrote the preface of it in Sanskrit and explained the concept in Nagari script.

### DISCUSSION :

Each chapter has it own special significance. As many as thirty diseases are selectively complied in the book and explanation of the origin and symptoms of diseases and their curative medicines is given. About 880 medical preparations were prescribed for various ailments b using plant, animal and mineral substances. He discovered several life saving drugs like brahamaastarasam, suchikamukharasam, suchikaabharanam etc.

Basavaraju was the only person who stressed the importance of the examination of the pulse and urine for the diagnosis of various diseases. These types of diagnostic methods are not found in an ayurvedic classic and are unique to this treatise.

He described 100 diseases with remedies in telugu poems. New names for children's diseases are also given. But there are no proper medical terms for tem either in Sanskrit or in English.

Most of the medical herbs mentioned in his book are available in Andhra Pradesh. But unfortunately the book is written in telugu script even through the concept is explained in Sanskrit and telugu. That is why it did not become a lexicon of medical terms.

Present study has been undertaken to fill this lacuna and prepare a list of medicinal plants used in ayurvedic classic 'Basavarajeeyam' Botanical names of the medicinal plants are alphabetically arranged. sough Indian vernacular names are also given in addition to Sanskrit and Hindi for easy identification.

Sing & chunekar (1972) also listed out drug plants mentioned in caraka samhita, susruta samhita and Astangahrdauayam.

Medicinal plants are identified after Abdul kareem (1997), anonymous (196), Hussain (1992) and Nadkarni (1974).
